

COMPUTER SUPPORT IN RV PARKS!

Chris and Jim made the decision to live full-time in their RV in 2003. Their business plan is to travel to RV parks across the country and help them provide wireless Internet access to their guests. And to help RVers with websites, email and other general computer issues.

In December 2003, the Guld's installed the Datasform 2 way Internet satellite dish—so they can be connected to the Internet ANYWHERE! They can also provide wireless Internet access to those nearby.

Chris Guld has been developing custom programs using Microsoft Access since its first release in 1991. At that time, she was the owner of a computer training center — Computer Savvy, Inc.— and developed the student registration system using Access. She has also developed applications for construction companies, middle school, independent consultants and many more. Now she is committed to transferring those skills to the web-based world. Her current focus is developing websites and web applications using Dreamweaver and Coldfusion.

Jim Guld has been a computer technician and network administrator since 1984. He was the system administrator for Computer Savvy, managing more than 100 computers in the classrooms and the business office on a combination of Novell and Microsoft networks. He was also a Microsoft Certified Trainer for Windows NT. Prior to Savvy, Jim was an on-the-road computer service technician. After Savvy, he was network administrator for an Internet service provider and for a local construction firm. His current focus is wireless networking and connecting to the Internet from the road.

For RV Parks we offer:

- Wi-Fi Internet setup to campsites
- Network setup & support for the office
- Custom websites
- Computer seminars presented in your facility for your guests

For RVers we offer:

- Assistance with setting up wireless Internet connection.
- Computer tuneups
- Custom websites, email addresses and Weblogs

For RV Parks: High Speed Wireless Internet Access for your guests

More and more campgrounds are providing wireless Internet access (Wi-Fi) to guests at their sites. A recent Time magazine article "Wi-Fi Gets Rolling" had this to say:

"In fact, the RV crowd is increasingly plugged in. The Recreation Vehicle Industry Association found that of 7 million households with RVs, 16% access the Internet on the road. And although the majority of the nation's 16,000 RV grounds still don't offer wireless access, scores of parks—from the Kampground of America in Kissimmee, Fla., near Disney World, to Yogi Bear's Jellystone Park in Estes Park, Colo.—are installing the systems."

We can help you determine the most cost-effective option for Internet access in your park. You may want to install antennas and transmit wireless Internet throughout your park, or you may just want a few high-speed Ethernet ports in your rec room. Whatever your configuration, we can help you with the decision and the implementation.

Wireless Service Available

We represent Coach Connect as the complete Wi-Fi solution for RV Parks.

This service will increase your occupancy rates, your guests will stay longer, and they'll be happier campers. Coach Connect will even pay you for users in your park! And, maybe the best part ... your park will be listed—as a Wi-Fi hotspot in the Coach Connect and Airpath networks. Once a guest signs up at one park, they will look for other parks in the network, and stay with you.

For RV Parks: Office Networks & Computer Seminars

An RV park office is like any other office that needs computers, a network and Internet access. We've been doing network administration for small businesses since 1985 and we can help you.

We also spent 14 years in the computer training industry and have the equipment to conduct seminars in the park's rec room. We can even do it outside in nice weather! Titles include: *Understanding Wireless Internet*, *Computer Maintenance for Everybody*, and *Sharing Digital Photos over the Internet*.

For RVers: Computer Tuneups

Just like a car, a computer runs better with periodic preventive maintenance. If you have ever gotten a virus or had programs freeze up, you have experienced issues that could have been prevented with maintenance techniques.

We call it BUCS: Backup, Update, Cleanup and Scan/defrag. If your computer has a USB port, we can make a current backup for you. We will update, cleanup, scan/defrag and provide you with instructions so you can do your own tuneups. Check out our website www.CampgroundComputerHeroes.com and click on *Tech Support* for more details.

Standard Tuneup \$99

- Backup "My Documents"
- Windows Update
- Basic Disk Cleanup
- Virus Scan
- SpyBot scan

For RVers: Custom Websites and Email

Don't use the email address you were given when you signed up for Internet service. If you use chris635@aol.com then you are locked into using AOL. If you use agh543@Earthlink.net you are locked into Earthlink.

Get your own Domain name like ILoveMyRV.com. Your email can then be chris@ILoveMyRV.com, and it won't matter what service you use to get Internet access. AOL charging too much? Switch to Juno. Juno doesn't have access numbers where you're going? Switch to Earthlink. Maybe you're really lucky and the RV park you're staying in has high-speed wireless access. You don't want to use that and still have to pay for AOL too! Through all these changes, your email will stay chris@ILoveMyRV.com.

It is an easy matter to get your own Domain and then your own email address. Once you own the Domain "ILoveMyRV.com" you can put up your own personal website. No more emailing dozens of photos to dozens of people, just post them to your website and tell all your friends and family to go to www.ILoveMyRV.com to see what's going on. You can even set up your own Weblog to write about your travels.

To see what we're talking about, take a look at www.jimandchris.com and click on the link to our Weblog: *Odie's Roadies*.

Web Identity Package: \$200**

Domain name
Up to 5 email addresses
Custom 1-page website
Weblog
**includes \$70 annual hosting fee
